

Personal Health Report

A comprehensive analysis of your health using Blood, Urine and Physicals data

Prepared for
HDO

29-05-2026

Date of test

29-05-2026

Report released on

Personal Health Analytics Report

What to expect from this report

- ✓ Analysis and explanation of your health check results.
- ✓ Diet dos and don'ts and other guidance.
- ✓ Next steps to maintain or improve your health.

Always consult your doctor

- ✓ While some parameters help in diagnosis independently, others are more complex and require examination by a doctor. Hence you might find some parameters in this report that are yellow, orange, red or have no color or explanation which you will need to discuss with your doctor.
- ✓ The Smart Health Report is created to help you understand your report better and is not intended to replace a doctor.

Your Health Summary

i A comprehensive analysis of your health using Blood ,Physicals and Urine data only and does not include any other test you might have done. (X ray, Ultrasound study, ECG, ECHO, Stool Test, etc.)

Congratulations

for getting a health check done. This is the first step towards taking control of your health. We noticed that you are doing well with the following:

- Sugar tested is normal
- Kidney functions have tested normal
- Blood calcium is normal
- Thyroid function test is normal
- Hemoglobin levels are normal
- Liver functions have tested normal

Please note!

The blood test result below seems abnormal and needs your attention.

- Cholesterol parameters needs attention

Your Health Picture

Your Important Parameters at a Glance

Profile	Important parameters in respective profile			
 PHYSICALS	Weight Value: 75 kg Range: 50-63	BMI Value: 27.5 kg/m² Range: 18.5-23	Body Fat% Value: 22.5 % Range: 7-20	Height Value: 1.65 m
 GLUCOSE	HbA1C Value: 5.0 % Range: <5.7	Glucose (Fasting) Value: 100 mg/dL Range: 70-100		
 LIVER FUNCTION	Alkaline Phosphatase Value: 112 U/L Range: 0 - 129	Bilirubin Total Value: 1.00 mg/dL Range: 0.1 - 1.2	SGOT/AST Value: 35 U/L Range: 0 - 40	SGPT/ALT Value: 40 U/L Range: 0 - 41
	Albumin Value: 4.3 g/dL Range: 3.5 - 5.5	Total Protein Value: 7.0 g/dL Range: 6 - 8		
 KIDNEY FUNCTION	Serum Creatinine Value: 0.80 mg/dL Range: 0.6 - 1.20	Uric Acid Value: 5.0 mg/dL Range: 3.4 - 7	Calcium (Ca) Value: 10.0 mg/dL Range: 8.0 - 11.0	
	Blood Urea Value: 36.0 mg/dL Range: 15 - 45			
 HEMATOLOGY	Hemoglobin (Hb) Value: 14 gm/dL Range: 13.2 - 16.6	PCV Value: 44 % Range: 38.3 - 48.6	Total RBCs Count Value: 5.8 Million/cu.mm. Range: 4.7 - 6.1	
	WBC (Total Count) Value: 10000 Cells/cumm Range: 4000 - 11000	Eosinophils Value: 5 % Range: 1 - 6	Platelet Count Value: 3.9 Lakhs/cumm Range: 1.50 - 4.50

Profile	Important parameters in respective profile		
 IRON	Serum Iron Value: 132 µg/dL Range: 59 - 158		
 CHOLESTEROL	Total Cholesterol Value: 205 mg/dL Range: 0 - 200	LDL Cholesterol Value: 99 mg/dL Range: 0 - 100	HDL Cholesterol Value: 38 mg/dL Range: 40-60
	Triglycerides Value: 148 mg/dL Range: 0 - 150		
	ⓘ The overall effect of lipid profile is determined mainly by LDL, HDL and marginally by Triglycerides, age and gender.		
 THYROID PROFILE	TSH (ECLIA) Value: 3.80 µIU/ml Range: 0.27 - 4.2		
 URINALYSIS	Urine Sugar Value: NIL Range: NIL	Pus Cells Value: 3 Range: 2 - 4	Urine Albumin Value: NIL Range: NIL

Some of Your Important Parameters Explained

HDL

Result: **38**
mg/dL
Range: **40-60**

Cholesterol is a waxy, fat-like substance that is found in the blood.

HDL-C (High density lipoprotein Cholesterol) is a type of cholesterol and is called a "good" cholesterol. It carries cholesterol away from the blood vessels into the liver for breaking down and removing from the body. Hence HDL prevents clogging of blood vessels and heart attack.

Cause / Effect of these parameters

As a person ages, low levels of HDL-C (good cholesterol) increases the chances of forming blockages in the blood vessels of the heart or brain which can in old age lead to heart attack or stroke.

➔ What can you do about it?

Approaches to raising HDL-C include lifestyle factors such as creating a healthy weight management plan, increased physical activity and stopping smoking.

In diabetics, a normal HDL level reduces the risk of heart attack and stroke.

Some of the foods rich in Omega-3 fatty acids like fish (salmon, tuna etc.), oils (olive oil, etc.), nuts (almonds, cashews etc.) improve HDL-C.

Total Cholesterol

Result: **205**
mg/dL
Range: **0 - 200**

Cholesterol is a waxy, fat-like substance that is found in the blood. It is required by the body to build cells. But too much cholesterol can be a problem.

Cholesterol comes from two sources. The liver makes all the cholesterol we need. The remainder of the cholesterol in the body comes from foods derived from animals.

Cause / Effect of these parameters

Cholesterol travels through the blood on proteins called 'lipoproteins'. Two types of lipoproteins carry cholesterol throughout the body.

- LDL-C (Low Density Lipoprotein Cholesterol) is also known as "bad" cholesterol.
- HDL-C (High density lipoprotein Cholesterol) is also known as "good" cholesterol.

➔ What can you do about it?

You have elevated levels of Total cholesterol in your body.

You can reduce them by

- Following a healthy diet, keeping your weight in control, limiting your sugar intake
- Eating more fibre
- Exercising regularly (after consulting a doctor)

Some of Your Important Parameters Explained

HbA1c

Result: 5.0
%

Range: <5.7

HbA1c is a blood test performed to measure the average sugar in the blood for the past 2 to 3 months.

If the HbA1c has been higher than 6.5% on many occasions, then it is said to have crossed into diabetic ranges.

HbA1c levels higher than normal indicate poor control of blood sugars for the past 2 to 3 months.

Cause / Effect of these parameters

The symptoms of diabetes can be mild and go unnoticed.

Common symptoms of diabetes are:

- Urinate a lot often at night and feel very thirsty
- Feeling very hungry and also losing weight- even though you are eating more
- Cuts/bruises that are slow to heal

- Fatigue
- Tingling, pain, or numbness in hands/feet etc.

What can you do about it?

Congratulations, your HbA1c has tested normal. Your last 3 months sugar control has been normal

- Follow a low carb/low sugars diet to keep it normal.
- Exercise regularly if your doctor allows you.

LDL

Result: 99
mg/dL

Range: 0 - 100

Cholesterol is a waxy, fat-like substance that is found in the blood.

LDL-C (Low Density Lipoprotein Cholesterol) is a type of cholesterol and is also called as "bad" cholesterol.

Increased levels of LDL-C in blood causes clogging of blood vessels to the heart and brain over time.

Cause / Effect of these parameters

As a person ages, bad cholesterol in blood can lead to formation of blockages in the blood vessels of the heart or brain which can in old age lead to heart attack or stroke.

What can you do about it?

Your LDL-C is normal.

The LDL-C can be maintained normal by

- Low cholesterol diet
- Increasing physical activity
- Maintaining normal weight

Some of Your Important Parameters Explained

Creatinine

Result: **0.80**
mg/dL
Range: **0.6 - 1.20**

A creatinine blood test measures the level of creatinine in the blood.

Creatinine is a waste product that is formed when creatine, which is found in the muscles, breaks down. Creatinine is filtered out of the body from the kidneys. So, Creatinine levels in the blood can tell the doctor how well the kidneys are filtering.

Cause / Effect of these parameters

High levels of creatinine in blood may mean the kidneys are getting damaged.

What can you do about it?

You are doing well to keep your Creatinine levels in control.

Keep yourself well hydrated by drinking plenty of water on a daily basis if your doctor allows.

Avoid over the counter medicines and always consult your doctor before taking any medications.

TSH

Result: **3.80**
μIU/ml
Range: **0.27 - 4.2**

TSH (Thyroid Stimulating Hormone) is a hormone secreted by brain (pituitary gland) which regulates the production of thyroid hormones (T3,T4) from the thyroid gland in the neck.

TSH level that is too high or too low can indicate the thyroid gland isn't working correctly. High TSH levels indicate under active thyroid gland (hypothyroidism). Low TSH levels in the blood indicate hyperactive thyroid gland (hyperthyroidism).

Cause / Effect of these parameters

Symptoms of hyperthyroidism include

- Nervousness & anxiety
- Tiredness
- Twitching or trembling
- Irregular or fast heart beats
- Weight loss, etc.

Symptoms of hypothyroidism include

- Tiredness
- Weight gain
- Infertility
- Constipation
- Pregnancy complications etc.

What can you do about it?

Your TSH levels are normal.

Result: **14**
gm/dL

Range: **13.2 - 16.6**

- 

Result: 3.9
Lakhs/cumm
Range: 1.50 - 4.50

- 

Some of Your Important Parameters Explained

Uric Acid

Result: **5.0**
mg/dL
Range: **3.4 - 7**

Uric acid is a breakdown product of a particular protein (purine). Certain foods are high in purines and for some people, eating these purine rich foods can increase uric acid.

Cause / Effect of these parameters

High uric acid level can be a precipitating factor for gout and renal stones as well as a strong risk factor for Metabolic Syndrome and Cardiovascular disease.

High intake of fructose-rich industrialized food and high alcohol

intake (particularly beer) seem to influence plasma uric acid levels.

What can you do about it?

You are doing well to keep your Serum Uric Acid levels in control.

Avoid foods rich in purine like red meat, organ meat, shellfish like mussels, fishes like sardines, anchovies, sugary beverages, high fat dairy products and alcohol to keep the Uric acid normal.

Triglycerides

Result: **148**
mg/dL
Range: **0 - 150**

Triglycerides (TG) are fats which can either come from the food (fat in food) we eat or made by the liver when we eat sugary foods. When our body can't use all the TG it eats or produces, they get stored as fat cells.

Cause / Effect of these parameters

High levels of TG in blood along with other risk factors like lack of exercise, being overweight, smoking, consuming excess alcohol, having diabetes etc. can increase risk of developing heart attack and stroke.

What can you do about it?

You are doing well to keep your TG levels in control.

TG levels are best maintained through diet (low sugars and low fats) and exercise.

Your Diet Dos & Don'ts

i This personalized diet guideline has been designed based on your report. For optimal adjustments, engage in a discussion with your nutritionist, as they know best. Please also be careful of any food allergies or intolerance that you are sensitive to.

The following are covered in your Diet Dos & Don'ts :

[Cholesterol Lowering](#) | [Good Cholesterol Improving](#)

Fruits and Vegetables

- ✓ Eat 400 grams vegetables and 100 grams fruits daily, including them in each meal and snack.
- ✓ Consume avocado as it is known to increase HDL and decrease LDL.
- ✓ Consume 1-2 garlic cloves on an empty stomach in the morning to increase good cholesterol and decrease bad cholesterol.
- ✓ Include high-fiber vegetables such as okra, eggplant (brinjal), and carrots in your diet for cholesterol management.
- ✗ Instead of consuming freshly squeezed fruit juices, it is better to consume the whole fruit.

Cereals

- ✓ Include nutrient-rich millets like jowar, bajra, and others into your diet.
- ✓ Include high-fiber cereals in your diet, such as brown rice, red rice, whole wheat, oats, quinoa etc.
- ✗ Avoid consuming refined carbohydrates such as sugar, jaggery, white rice, cornflour, maida, and its products.

Pulses

- ✓ Include unpeeled lentils (dal) like moong dal, tuvar dal, masoor dal etc. in your diet.
- ✓ Include pulses like rajma (kidney beans) and green mung beans into your diet.
- ✓ Include pulses such as kabuli chana (chickpeas), green chana (green gram), and black chana (black gram) in your meals.

Dairy

- ✓ Include skimmed or low-fat milk and its products such as curd, buttermilk, yogurt, paneer etc. in your diet.

Your Diet Dos & Don'ts continued...

Dairy

- ❌ Avoid high-fat or sugary dairy products including khoa, cheese, sweetened yoghurt, and creamy paneer (instead, choose low-fat paneer).

Nuts and Seeds

- ✅ As a snack between meals, you can enjoy small servings of whole nuts such as almonds and walnuts.
- ✅ To boost the nutritional content of cereals, salads, yoghurt, and dals, add Omega-3 fatty acid-rich seeds such as flaxseeds, chia seeds, and sabja (basil) seeds.
- ❌ Restrict eating salted or fried nuts.

Oils and Fats

- ✅ Every day, consume no more than 1-2 tablespoons of healthy fats. Select healthy oils like sunflower oil, rice bran oil, olive oil and ghee. Alternate between oils rather than using simply one.
- ✅ Using oils that are cold pressed is recommended.
- ❌ Limit your consumption of saturated fats, such as butter.
- ❌ Avoid fried foods.
- ❌ Avoid high-fat foods such as peanut butter and mayonnaise.

Meats

- ✅ Consume lean protein sources like egg whites and chicken.
- ✅ Include 1-2 servings of fatty fish such as salmon, mackerel, basa or tuna into your weekly meals.
- ✅ It's advisable to consume one whole egg on a regular basis.
- ❌ Avoid consuming red meat (including mutton, lamb, beef, pork, etc.).
- ❌ Make sure the meat is completely cooked. Avoid consuming raw or undercooked meats.

Your Diet Dos & Don'ts continued...

General Advice

- ✓ It's fine to nibble between meals if you're hungry, but choose nutritious options like a fruit bowl, sprouts salad, or nuts.
- ✓ Consume a minimum of 8-10 glasses of water daily, as long as your doctor approves.
- ✓ Utilize healthy cooking techniques like steaming, boiling, roasting, stewing, and poaching.
- ✓ Maintain a gap of at least 2 hours between your last meal and bedtime.
- ✓ Be mindful of your food consumption, stop eating when you feel full, and avoid overeating.
- ✓ Include clear soups, unsweetened lemon juice, and seasonings like pepper, mint, garlic, and curry leaves in your diet.
- ✓ Consume cooked foods within 4-6 hrs of preparation. If left at room temperature, reheat thoroughly before consuming.
- ✓ Earthen pots & pans are the safest cookware followed by stainless steel.
- ✓ Use Teflon coated pots & pans carefully. Follow cleaning and usage instructions strictly and discard pans when the coating is worn out or damaged.
- ✗ Avoid the consumption of sweets, as they tend to be high in both fats and sugar.
- ✗ Avoid snacks such as candy, French fries, instant noodles, ice cream, and soft drinks as they are high in calories and can lead to obesity as well as interfere with hunger and the consumption of nutritional foods.
- ✗ If you consume alcohol, consider avoiding its intake.
- ✗ Avoid packaged foods since they include a lot of preservatives, salt/sodium, trans fats, added sugars, artificial sweeteners, and additives.
- ✗ Don't use reheated oils and fats.
- ✗ Restrict intake of HFSS (foods high in Fats, Sugar & Salt) and UPF (Ultra processed foods) like sauces, cheeses, jams, biscuits, cookies, cakes, pastries etc as they are low in fibre and micro nutrients and also are high in calories.

Your Next Steps

Doctor Consultation

In view of the reports, please consult:

DOCTOR	CONDITION
General Physician	High Cholesterol

Physical Activity Advice

Please consult your doctor before you start the physical activity/exercise.
Opt for at least 150 minutes per week of moderate intensity physical activity. This could include:

- At least 30 minutes of aerobic activity 4 days a week (like Jump rope (imagine/real), Jogging, Running, Brisk walking)
- At least 15 minutes of muscle stretching activity 1 day a week (like Crunch, Leg lifts, Plank, Knee-to-chest stretch)
- At least 15 minutes of muscle strengthening activity 1 day a week (like Sit-ups, Gardening (digging and shovelling), Lift free weights/carry groceries (<20kg), Push-ups)
- You can also practice yoga on a regular basis to improve your balance & flexibility.

Nutrition Advice

Please follow a diet that is:
Cholesterol lowering | Good cholesterol improving
(Please refer to Diet Dos and Don'ts for further details)

Additional Advice

- Consume cholesterol lowering medicines if recommended by the doctor.

Follow Ups

Please check your weight on regular basis.. Please check your weight and blood pressure on regular basis. Your doctor knows best - please seek his/her advice for the follow up tests.

After 3 months

- Fasting Lipid Profile

Your Clinical Data

Color Guidance

Group colors show the health of your organ/profile. The colors are decided based on how your doctor would decide whether your organ or profile is doing ok after looking at the combination of your tests, age and gender. Ex. If your kidney function profile is green, and your individual tests are yellow/orange/red, then it means that the kidney organ system is normal even though some of its parameters are off.

PHYSICALS

TEST NAME	RESULT	UNIT	RANGE	LEVEL
Height	1.65	m	-	
Weight	75	kg	50-63
